## CREATE CONSISTENCY WITH EVERY RESTART

Deep Freeze Mac provides a completely non-restrictive working environment where there is no need to be concerned about system damage or misconfiguration; a simple restart eradicates all changes and ensures that the standard system configuration is available at all times. All changes to a machine are temporary for that working session, including installation or removal of software and application preference configuration. The need for IT professionals to perform rebuilds, re-image, or troubleshoot computers is eliminated, resulting in a reduction in IT expenditures and an increase in computer uptime.

### Protect Your Mac Workstations

- Restore your hard drives or specific partitions back to their initial pristine condition
- Schedule maintenance periods to perform Apple Software Updates automatically
- Create a global or user-specific ThawSpace, a virtual partition, to save data across restarts
- Pre-configure all aspects of Deep Freeze Mac for custom installations
- Integrate with Apple Remote Desktop to remotely deploy and manage Deep Freeze Mac
- Compatible with any user account type, including administrator, standard, and root
- Add an extra level of security with a Deep Freeze user name and password separate from the operating system
- Prevent the Deep Freeze icon from appearing in the menu bar (Stealth Mode option)

## See for yourself!
**Evaluate the non-restrictive, restart-to-restore technology of Deep Freeze Mac today at**
### www.deepfreeze.com.au

### Maximum Control and Flexibility
Selectively Freeze or Thaw fixed drives, volumes, or partitions. Create customized ThawSpaces and utilize flexible password management. Export or import configuration files to or from other Deep Freeze Controllers for consistent, rapid deployment.

### Scheduled Maintenance & Apple Software Updates
During computer downtime, schedule automatic Apple software updates. Configure workstations to shut down after the updates are completed, and disable the keyboard and mouse during the maintenance period. Configure the schedule to repeat daily or weekly.

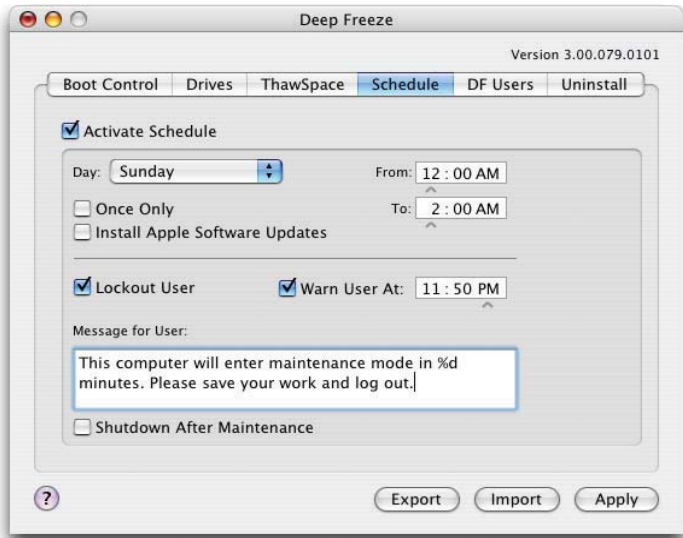

### LDAP Compatibility
LDAP, Active Directory, or Open Directory accounts can be used without limitation. A network user's home directory is stored on a server so documents can be saved there perma- nently while the current computer being used remains completely intact.
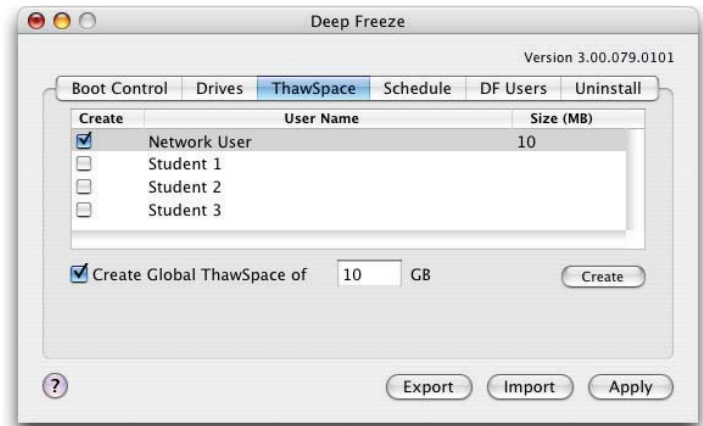

### Multi-Language Support
Deep Freeze Mac is available in six languages: English, Spanish, German, French, and Japanese.

### ThawSpace Capability
Save documents and changes persistently across restarts with this new capability. Create a global ThawSpace that is acccessible for all users, or set up user-specific ThawSpaces.

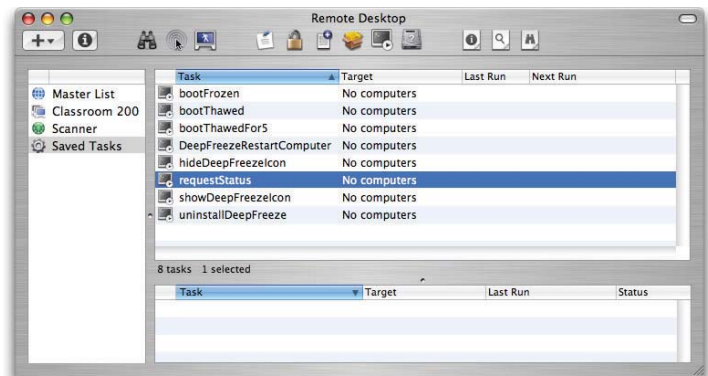

### Customized Installation
Use the Deep Freeze Assistant to create a customized instal- lation package pre-configured with a user name and pass- word, a global or user-specific ThawSpace, and a Mainte- nance Schedule. This package can be deployed network wide using ARD, as part of a master image, or manually.

### Seamless Integration with ARD
Administrators can select specific Deep Freeze related tasks from the ARD console to remotely deploy and manage Deep Freeze Mac.

## About Faronics

Faronics develops and markets intelligent utilities for absolute control of multi-user computing environments. Faronics' market-leading solutions ensure 100% workstation availability and have dramatically impacted the day-to-day lives of thousands of information technology professionals and computing lab managers. Our user-driven, powerful technology innovations benefit educational institutions, libraries, government organizations and corporations.
